

Matheus Costa

FULL-STACK ENGINEER

About Me

*I'm a passionate software developer with **3 years of experience** in Python and JavaScript. I've had the pleasure of diving into technologies like **jQuery, Django, React, and TypeScript**, and I feel right at home with **Linux and Docker**.*

Experience

Higia Health Technology

March 2022 – Present

- Development of a speech-to-writing translation module (using the Web Speech API), making it possible to dictate the medical report
- Module to manage customizable common phrases that the radiologist could configure both voice and text commands for greater productivity
- Report lifeline graph, showing how long it took at each stage when preparing the medical report
- Development of profiling tools
- Performance improvements using profiling tools to identify bottlenecks in database queries, libraries that could be replaced, unnecessary requests, and so on
- Various other improvements in existing features and creation of new ones

State University of Piauí - UESPI

February 2021 - March 2022

- Development and maintenance of a REST api that served data to a mobile application to manage some internal processes at the university related to the student
- Writing automated integration and unit tests
- Deploy in docker with nginx, uwsgi and django

Education

State University of Piauí
